
“Indigenous NT” PC Keyboard Layout

Roman Orthography - English (Canada)

This keyboard layout was developed to retain maximum standard (US ANSI) functionality while providing access through the Alt-Gr (Right Alt) key to characters and diacritics used by official languages of the Northwest Territories.

They keyboard uses combining diacritical marks that are typed *after* the character which it modifies. Shift + Alt-Gr provides access to uppercase characters or alternative positioning and forms for some diacritics.

Version 3.0: April 1, 2019
