ः क ः र त र	To obtain any half letter press the key for the letter and then 'x'
क् त् त्	To obtain any letter with a virama press the concerned key for the letter and then 'X' (capital X)****

\*\*\*\* Note: the '+' and ';' also produce a virama but when the following letter is keyed it will transform but with 'X' the virama will be permanent without any change.

Pressing 'q' will give roman characters till the end of the word (till pressing the space bar. So to type one word in Roman alphabet this will be useful.

Following any consonant 'ai' will produce the ai glide matra, so to get some thing like पड़ use the 'V' in between the consonant and the vowel (i.e.; pVi will produce पड़)
